Professional Summary

An active 4th-semester Associate Degree (D3) student in Informatics Engineering at Politeknik Negeri Batam, focusing on information system development and relational database management. Possesses a strong understanding of software engineering, analytical logic, and a high commitment to industry regulatory compliance driven by disciplined operational work experience.

Core Skills

- Information Systems & Web: Databases (SQL, MySQL), Web Programming (HTML, CSS, JavaScript, PHP).
- Software Engineering: Object-Oriented Programming (OOP), Prototyping, Agile Methodologies.
- Testing & Maintenance: Software Testing, Quality Assurance (QA), Software Installation & Maintenance.
- Artificial Intelligence (AI): Python, Classification Algorithms (Naive Bayes, K-Nearest Neighbor).
- Soft Skills: Teamwork, Critical Thinking, Compliance with Industry Standards, Time Management.

Project Experience

Web-Based Futsal Field Reservation Application

Role: Full-Stack Developer & Database Designer

- Developed an integrated web-based futsal field reservation application to digitalize the booking process and minimize scheduling conflicts (double-booking).
- Designed a relational database architecture (MySQL) to manage customer data, real-time field availability, and transaction history.
- Built a responsive user interface (UI/UX) and optimized the backend system to enhance the operational efficiency of field management.

Web-Based Musical Instrument Rental and Studio Booking Application

Role: Full-Stack Developer

- Built an interactive musical instrument rental and music studio platform that enables customers to view live inventory catalog availability.
- Implemented a systematic rental transaction workflow, ranging from instrument selection and shopping cart management to tracking estimated return times.
- Applied structured software development methodologies to ensure system stability and ease of use for both customers and administrators.

AI Project: RambUILD (Indonesian Traffic Sign Recognition Application)

Role: AI Engineer & Developer

- Built an AI-based image classification model to recognize various types of traffic signs in Indonesia.
- Conducted image data preprocessing and structured model training to ensure high accuracy within the system.

Industrial Software Project: Document Archiving & Classification System

Role: Full-Stack Developer & Database Designer

- Developed an integrated web-based archive management application to automate organizational document classification.
- Designed a relational database architecture using MySQL with an efficient table structure to support fast document data retrieval.
- Tested and compared the accuracy of 2 algorithms (Naive Bayes and K-NN) across 8 rows of comparative testing scenarios to achieve optimal system performance.

Education

- Associate Degree (D3) in Informatics Engineering | Politeknik Negeri Batam 2024 - Now
- State Senior High School 8 Batam (SMA Negeri 8 Batam) 2021 - 2024
